The issuer believes that, at the time of its issuance and based on transparency data made publicly available by the issuer, these covered bonds would satisfy the eligibility criteria for Article 129(7) of the Capital Requirements Regulation (EU) 648/2012. It should be noted, however, that

whether or not exposures in the form of covered bonds are eligible to preferential treatment under Regulation (EU) 648/2012 is ultimately a matter to be determined by a relevant investor institution and its relevant supervisory authority and the issuer does not accept any responsibility in this regard.

C. Harmonised Transparency Template - Glossary

HTT 2019

The definitions below reflect the national specificities

Field Number	1. Glossary - Standard Harmonised Items	Definition
HG.1.1	OC Calculation: Actual	The ratio between weighted assets and privileged debt. The numerator of the ratio takes into account only assets which fulfill the legal eligibility criteria to the cove pool: for residential loans to individuals, the eligible amounts are limited to 80% of the pledged property value, unless for loans guaranteed by FGAS for which the limit is set at 100%; all other loans are limited at 60%. It excludes the amounts exceeding the legal LTV limits, all repurchase agreements as well as all non collateralised group's exposures exceeding 25% of the non-privileged liabilities.
HG.1.2	OC Calculation: Legal minimum	The legal minimum in France is set at 105%.
	OC Calculation: actual	The value of the regulatory overcollateralisation ratio is estimated. It is validated by the Specific Controller at the end of the quarter following the closing date
HG.1.3	OC Calculation: Committed	Non privileged liabilities as of privileged liabilities, after swap and net of repurchase agreements
HG.1.4	Interest Rate Types	Fixed and Floating Contractual maturities are calculated assuming a zero prepayment scenario on the cover pool assets.
HG.1.5	Maturity Buckets of Cover assets [i.e. how is the contractual and/or expected maturity defined? What assumptions eg, in terms of prepayments? etc.]	Contractuar maturities are calculated assuming a zero prepayment scenario on the cover poor assets.
HG.1.6	Maturity Buckets of Covered Bonds [i.e. how is the contractual and/or expected maturity defined? What maturity structure (hard bullet, soft bullet, conditional pass through)? Under what conditions/circumstances? Etc.]	Hard bullet only
HG.1.7	LTVs: Definition	Indexed current LTV : Calculated on the basis of the current outstanding amount of the loans to the appraised values or prices of the residential assets using an indexation methodology. The loan-to-value ratio on residential mortgage loans is the ratio of the outstanding principal over the current value of the underlying real estate.
		Unindexed LTV: Calculated on the basis of the current outstanding amount of the loans and the initial valuation / price of the residential assets.
HG.1.8 HG.1.9	LTVs: Calculation of property/shipping value	France
HG.1.10	Valuation Model (AVM) or on-site audits LTVs: Frequency and time of last valuation	quaterly
HG.1.10	Explain how mortgage types are defined whether for residential housing, multi-family housing, commercia real estate, etc. Same for shipping where relecvant	Mortgage : right granted to a creditor on a real property as security for a debt, without dispossessing the owner of his right to the property. The types of loans financing residential properties in Compagnie de Financement Foncier's cover pool are as follows:
HG.1.12	Hedging Strategy (please explain how you address interest rate and currency risk)	Hedging transactions Both Assets and Liabilities are hedged for currency and interest rate risks at origination. Macro-hedging swaps are entered into when acquiring loan portfolios, while micro-hedging swaps are used for single transactions. Credit Foncier acts as counterparty on the swaps hedging the loan portfolios sold to Compagnie de Financement Foncier and on the majority of the vanilla swaps hedging the bonds issued by Compagnie de Financement Foncier. Major international banks act as counterparties on the swaps hedging the rest of the transactions All counterparties have concluded collateral agreements with Compagnie de Financement Foncier that require them to post collateral depending on their debt position and rating. However, the agreements stipulate that Compagnie de Financement Foncier shall not deposit any collateral. Interest rate positions are reviewed each quarter and macro-hedged if found that the position has deteriorated to an extent that might result in non-compliance wit the strict limits that Compagnie de Financement Foncier has committed to. Whenever early repayments exceed budgeted amounts, an interest rate swap is entered into in order to minimize the open position. Basic risks; resulting from different reference rates on positions already transformed into variable rates by swaps, are managed through macro hedges. Special interest rate risk reduction mechanisms have been put in place with the French state for the subsidized sector loans. No currency risk Compagnie de Financement Foncier does not allow any open foreign exchange positions. As such, all asset purchases or refinancing transactions that are not denominated in euros are systematically hedged against currency risk. Limits are set at EUR 3 million by currency and EUR 5 million in total.
HG.1.13	Non-performing loans	defaulted (over 90 days past due), written-off or delinquent loans. Non performing loans are expressed in percentage of total cover assets
